

Besides network packet capture function, E-Detective is capable to reconstruct the content of various Internet services added with reporting function. It is suitable for investigation and evidence retention of user Internet activities for all organization. ISMS will be more complete with deployment of E-Detective.

Features

- Comprehensive Monitoring of Users Internet Behaviour**
 Capture Internet traffic on network without installing agent based software on client PC. Support all PC OS platform. Easy to maintain and upgrade.
- Real-Time Reconstruction of Packet Capture**
 IT Auditor can obtain accurate real-time Internet communication content of network users.
- Strong Data Search Function**
 IT Auditor can obtain specific reconstructed record according to different search criteria defined. Association Search function allows relationship finding and link analysis.
- Support Data Export Function**
 IT Auditor can use 3rd party tools to conduct better analysis of the exported data.
- Scalable up to Large Size Network Deployment**
 Scalable deployment any network size as well as either centralized or distributed network environment with combination deployment of E-Detective, DRMS (Data Retention and Management) and CMS (Centralized Management) systems.
- No Forensics Expert Required**
 Reconstructed content is presented in easy readable format. IT Auditor can easily understand and operate the system.
- Support Multiple Internet Services or Protocols**
 Support content reconstruction of multiple Internet services and protocols.
- Multiple Reporting and Analysis Function**
 Besides reconstruction function, the system also provides multiple statistical and time reports with chart analysis function which allows the IT Auditor better overview of the entire network user condition.
- SSL Content Interception Plugin**
 Provide optional deployment of HTTPS content decryption and reconstruction module.

Supported Protocol

E-MAIL

POP3, SMTP, IMAP, Web Mail(Yahoo Mail, G Mail, Hot Mail...)

Instant Message

MSN, ICQ, Yahoo, QQ, UT, SKYPE, Google Talk

Social Network Service

Facebook, Twitter, Plurk, Sina, Sohu, Tencent, 163, Kaixin, Renren, Qzone

HTTP

Web Page(Request, Response), File Download/Upload, Video Stream (FLV)

File Transfer

FTP, P2P, Dropbox, Evernote, CIFS(With EDGS Version)

Others

Telnet, Online Game, VoIP, SQL(By EDGS Version), Unknown Connections

Report and Analysis Tool

- **Reconstructed Data Record Viewing**

Data presented in a simple, intuitive and easily understandable manner.

- **Analysis of Content Reconstructed**

IT Auditor can easily obtain and understand the user network online behaviour.

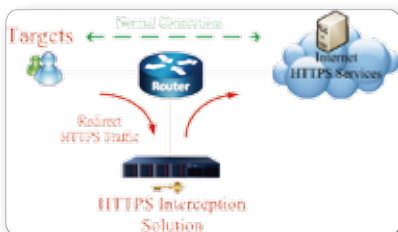

- **Communication Association and Relationship Analysis**

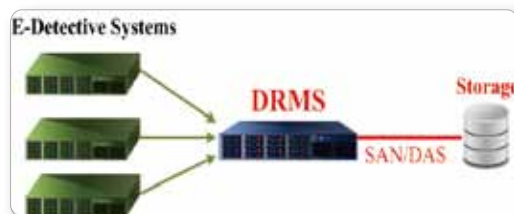

Provide correlation capability to IT Auditor through the Association Relationship Analysis function.

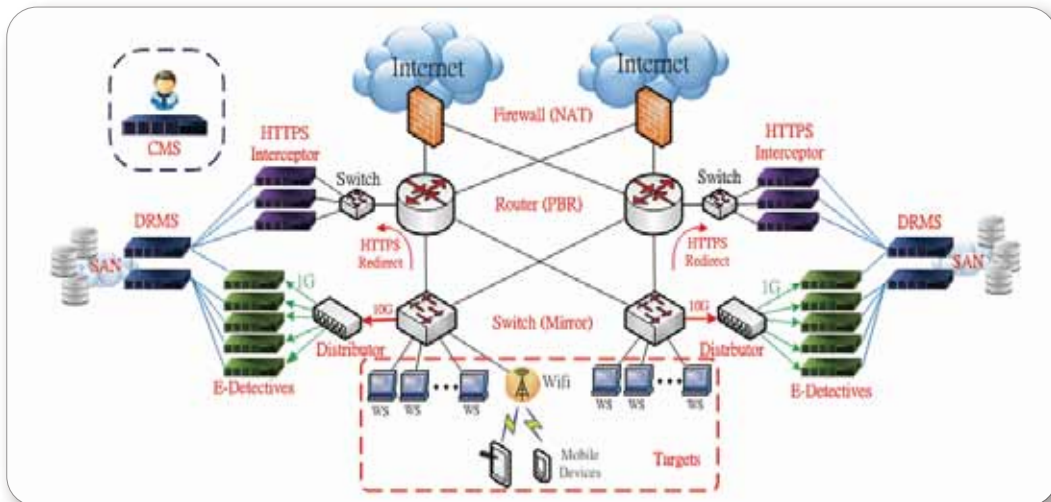

- **HTTPS Proxy Optional Plugin Package**

- **Data Management and Retention System Optional Package**

- **Large Scale Solution Deployment Architecture**
